This document is showing examples of how the team would track the Definition of Done's tasks. For this code challenge, we have a separate checklist for user stories and another one for the entire release

[Example] Definition of Done checklist for User Story #1**Unit tests written and passing**

In Progress

Code builds without errors

Done

Security vulnerability scan passing

Done

Peer code review performed

Done

Feature is tested against acceptance criteria

Done

Cross-browser testing done

Done

Mobile testing done

Done

QA performed & issues resolved

Done

Documentation updated

Done

Feature validated by Product Owner

N/A

Feature validated by UX/UI designer

Done

[Example] Definition of Done for Code Challenge Delivery**Code complete**

Done

All unit & functional tests are green

Done

All the acceptance criteria are met

Done

Project can be built and deployed on another machine with a one or two-line command

Done

QA is done & all issues resolved

Done

OK from the team: UX/UI designer, developers, software architect, project manager, product owner, QA

Done

README file with instructions for building and deploying project has been included

Done

All project artifacts submitted by way of a pull request to the private repository

Done

Apache License 2.0 attached to pull request
